The transfer process went well however, there is still some methyl mercaptan in one of the pipes and the building cannot be called 'all clear' for personnel as yet. Since this is such a high profile site, I want to ensure there are no potential issues remaining.

DuPont is currently working on a plan to remove the remaining methyl mercaptan from the piping. Once this is accomplished and the monitoring/sampling data shows non detect, I will make the call the ER phase is complete.

TCEQ was incorrectly notified this morning the all clear had been called. I spoke with Mike Davis and updated him on the current status.

The request has been made to DuPont for, 'the amount of methyl mercaptan onsite at time of incident' and I will pass on the information as soon as I receive it.

Please confirm receipt as I have been having some connection/transmission issues.  
Thanks.
